SET IT AND FORGET IT

WHAT IS THE DIFFERENCE BETWEEN PIESYNC AND ZAPIER?

When to choose PieSync?

- If you want to work with the same, correct and updated information in different apps simultaneously. Like in teams, or working remotely and on mobile.
- When you need duplicate prevention, data merging and updates on both sides.

For 2-way real time sync, PieSync is the way to go.

When to choose Zapier?

- If you need an if-this-then-that scenario, like a message appearing in the company chat every time somebody signs up for your newsletter.
- When you don't need the apps to talk to each other in both directions.

For 1-way, one time actions, Zapier is great.
